Woven on latest shuttleless looms using finest of yarns

Khosla Profil offers a wide range of fabrics suitable for a variety of outdoor end uses such as tents, awnings, tarpaulins and sailcloth. In keeping with the aesthetics required, these fabrics are woven on latest shuttleless looms using the finest yarns available in the country.

The range includes fabrics in plain, twill, satin and ripstop from Cotton, Polycotton, Polyester, Nylon and Polypropylene yarns. It uses 100%, blended and core spun yarns with normal and long staple Egyptian cotton for achieving high 'break and tear' strength. These fabrics are available in roll lengths upto 2000 mtrs and in widths of upto 3.6 mtrs with a choice of solid, fringe and tuck-in selvages.

Extensive range meeting critical benchmarks

Khosla Profil's modern finishing plant has effectively extended its range to include natural, dyed, waterproof and mildew proof fabrics for a variety of outdoor applications. It uses high quality indanthrene, reactive, pigment and disperse dyes for meeting the stringent light fastness, UV, water column and mildew standards. The company is currently in the process of introducing a range of internationally benchmarked fire retardant fabrics.

Complying international standards

Khosla Profil's finishing plant manufactures a variety of fabrics that comply with international standards such as ASTM, BS and DIN. It has the capability to supply fabrics with upto 3.6 mtr width with batch-to-batch facility.

Speciality fabrics from fully integrated, multi-locational set up

Khosla Profil is India's leading manufacturer of speciality fabrics that find a wide range of applications in different industries. The company is Asia's only producer of speciality fabrics that has a fully integrated operation right from fibre, yarn, fabrics and finished to made ups.

Today, Khosla Profil has evolved into a multi-product and multi-locational organization, with state-of-the-art plants at Wada and Daman. It manufactures a wide range of filter fabrics, industrial fabrics and fabrics for outdoor applications.

Technical superiority through advanced infrastructure and developmental activities

Khosla Profil's manufacturing facilities are equipped with leading brands of twisting, warping and weaving machines, as well as finishing and stitching equipment. Produced under quality measures conforming to international norms, the fabrics meet the most demanding of requirements. The research and development wing ensures that manufacturing of superior fabrics is an ongoing process at Khosla Profil. An ISO 9001:2008 company, Khosla Profil products have a distinctive competitive edge, worldwide.

The technical superiority, advanced manufacturing infrastructure, ongoing developmental activities and over 30 years of experience enables Khosla Profil to offer customized fabric solutions to suit every need.

With an extensive sales network and large international client base, Khosla Profil is now poised to take a giant leap forward in the world of industrial fabrics.

Industry specific fabrics from range of yarns and weaves

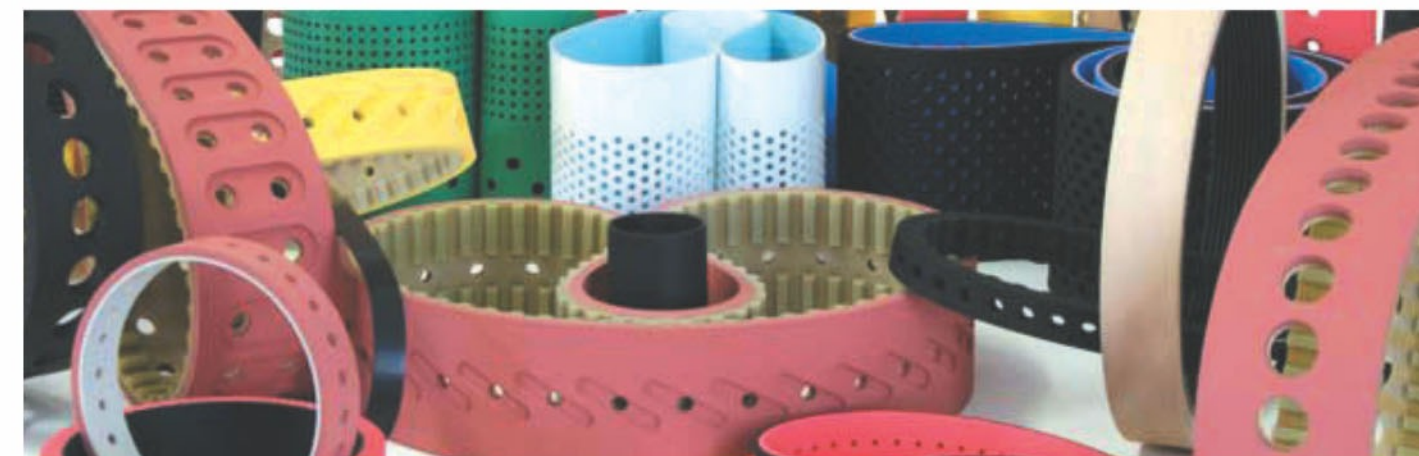

The industrial/technical fabrics from Khosla Profil are a major fabric source for the tyre, belting, coating and MRG industries.

The company has an exceptional and proven capability to develop industry specific fabrics that cater to individual customer requirements. It is perhaps the only Indian company to manufacture fabrics above 150 oz. It has an ability to handle a wide range of yarns and the capability to weave multiple designs and finishes.

Some of the yarns handled include Polyester, Nylon 6, Nylon 6.6 & Polypropylene, Cotton, Polyester/Cotton in normal, high tenacity, low shrinkage, adhesive activated, anti-static in Spun, Multifilament & Monofilament.

The fabrics are available in widths from 5" to 142" and in jointless rolls upto 2000 mtrs.

Khosla Profil has the ability to transfer ideas into real products in technical fabric. Over the past few decades the company has developed and tested many new fabrics conforming to international standards.
